

SANJAY CHUDALI

AI/ML Developer | Data Scientist | Data Engineer

Butwal, Nepal | +977 9742354671 | poudelsanjay93@gmail.com | linkedin.com/in/sanjaychudali01 | github.com/sanjaynep | sanjayp.me

SUMMARY

Final-year Computer Science and IT (CSIT) student working across AI/ML, data science, and data engineering. Experience spans the full pipeline: cleaning and moving data with SQL and Python, training and evaluating predictive models, and shipping those models into production web applications built with Django and React. Comfortable on the Linux command line, containerizing services with Docker, and working with core AWS services such as EC2 and S3.

TECHNICAL SKILLS

- **AI & Machine Learning:** Scikit-learn, Predictive Modeling, Time Series Analysis, OpenCV
- **Data Engineering:** SQL (PostgreSQL), Apache Airflow, PySpark, ETL Pipelines, Data Preprocessing, Feature Scaling
- **Data Analysis & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA)
- **Development:** Python (Django), JavaScript (React.js), RESTful APIs, Celery/Redis
- **Cloud, DevOps & Tools:** AWS (EC2, S3), Docker, Linux, Git/GitHub, Selenium, Postman

EXPERIENCE

- **Data pipelines:** Built data preprocessing pipelines handling missing values, outliers, and feature scaling ahead of model training.
- **Model deployment:** Connected trained machine learning models to production web applications built with Django and React.
- **Automation:** Wrote Python and Selenium scripts to automate data extraction, replacing manual collection work.
- **Backend architecture:** Built secure, scalable backend systems for data-heavy applications, focused on efficient client-server communication and performance.

PROJECTS

Hospital Management System (ML-Integrated)

2025 – 2026

Python · Django · React · Scikit-learn | [GitHub](#)

- Built a diagnostic assistant that predicts disease from patient symptoms with 96% accuracy.
- Built a full-stack platform that recommends doctors to patients based on the predicted diagnosis.
- Connected the Python prediction engine to a React dashboard so predictions update in real time for the user.

Netflix Data Visualization & Insights

2025

Pandas · NumPy · Matplotlib · Seaborn | [GitHub](#)

- Analyzed content distribution trends across movies and TV shows to see where each format was growing.
- Built visualizations showing regional content production and rating distribution worldwide.

Data Preprocessing etl_Pipeline with logs processing and LLMs suggestion

2025

Python · Scikit-learn | [GitHub](#)

- Built a reusable pipeline that cleans and prepares raw datasets for data mining in million dataset.
- Implemented logs processing and connected with model to detect anomaly in logs.
- If anomaly detected it will assed to llm for suggestion regarding to anomaly

EDUCATION

B.Sc. in Computer Science & IT (CSIT), Butwal Multiple Campus, Nepal

2079 B.S. – Present

- Currently in 7th semester, focused on AI/ML development and scalable application design.
- Final-year research: intelligent, symptom-based diagnostic assistants using high-precision modeling.

CERTIFICATIONS

- **DataCamp – Data Engineering Track:** Coursework in ETL pipeline design, pipeline automation, and database management for analytics workloads.
- **HTML & CSS Training – Hub IT Training (2079 B.S.):** Built responsive, accessible layouts for dashboards and web applications.
